GOOGLE
REPOSITIONS CC,
ITS
EXPERIMENTAL AI
AGENT, AS A
SHARED
HOUSEHOLD
TOOL.

FROM PERSONAL AGENT TO HOUSEHOLD ASSISTANT

Google Labs announced on September 17 that CC, its experimental AI agent, is now a household assistant for up to six family members. CC began as a personal agent delivering daily briefings from Gmail, Calendar, and Drive.

ROOM FOR THE WHOLE FAMILY

6

family members can use one CC account

USERS ASKED FOR THIS

Google said **top requests pushed the pivot**. People wanted **CC** to help run a household: tracking school schedules, sports practices, bills, and meal plans. Home management is harder when information sits in separate accounts.

Managing a household is often a **shared responsibility with a lot of coordination, made even more challenging with information spread over multiple user accounts.**

— TOM SHANE, SENIOR PRODUCT MANAGER, GOOGLE LABS

YOU CONTROL WHAT CC SEES

Each family member decides what to share: forward emails or photos, auto-share from senders like schools or sports clubs, or share Drive folders and calendars. Each week, CC suggests new senders to approve or ignore.

WHAT IT DELIVERS EACH MORNING

CC adds dates and to-dos to a shared calendar and task list, keeping them current as plans change. It builds a **shared household memory** for things like a go-to grocery list or favorite restaurants.

1

shared daily brief for the whole group

CC CAN ACT ON THE FAMILY'S BEHALF

CC can **pre-fill permission slips**, build supply lists, draft meal plans, and check live drive times from Google Maps between activities. It creates shared Docs and Sheets, asking for details it doesn't have.

HELIOS

ONE BIG LIMIT

18+

minimum age, U.S. only, personal Gmail required

NOT THE ONLY PLAYER IN THE GAME

CC enters a growing field of consumer AI agents focused on families. Startups like **Ollie and Fambot** are experimenting with AI tools to help parents manage household logistics.

HOW IT ALL WORKS

Every **CC** runs on its **own isolated cloud computer**, powered by Google's **Gemini** models and **Antigravity**, an internal system that allows it to take actions like filling out forms or pulling data from Google Maps.
